

## Abstract of the Disclosure

A leg protection device includes an airbag to be inflated in front of a leg portion of an occupant for protecting the leg portion; a casing for storing a folded airbag; and a gas  
5 generating device for inflating the airbag. The airbag is formed of a front panel facing the occupant and a rear panel at the opposite side of the front panel when the airbag is inflated. The airbag has a folded portion folded into the airbag between the front panel and the rear panel at a perimeter of the airbag.
